1. Guidelines for Effective Use of AI Services

AI Model / Service Selection

The Bharat AI Platform provides multiple AI services designed for different user requirements. Users can select the appropriate service based on the nature of the task they want to perform.

The available services shown on the platform are:

1. Multilingual reasoning
2. General purpose model
3. PPT generation
4. Summarization
5. Doc generation
6. Coding and Development
7. Cyber Security
8. OCR
9. Meeting Records & Notes

The following sections describe the purpose, selection procedure, and supported input types for each service.

2. Multilingual Reasoning

2.1. Using Multilingual Reasoning

Procedure

1. Open the **AI Service Selection** menu.
2. Select **Multilingual Reasoning**.
3. Enter the question or instruction.
4. Enter the content in the required language or languages.
5. Specify the preferred response language, where applicable.
6. Submit the request.

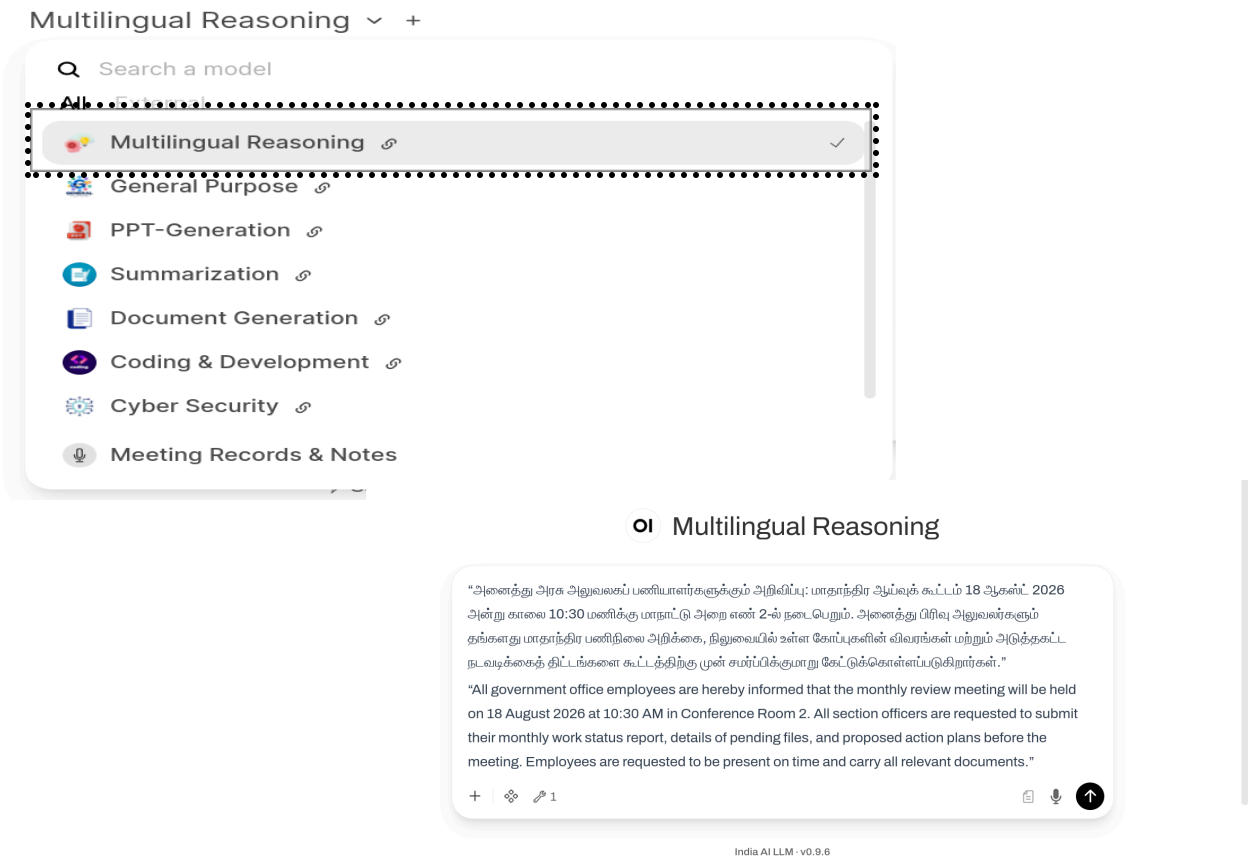

Figure: Multilingual Reasoning Service Selection

Example: 1

Paste the content for Multilingual translation.

3. General Purpose

3.1. Selecting General Purpose for General AI Assistance

Procedure

1. Log in to the Bharat AI Platform - https://bharatai.gov.in
2. Open the **AI Service Selection** menu.
3. Select **General Purpose**.
4. Verify that General Purpose is displayed as the selected service.
5. Upload a file,Enter the question, instruction, or task in the input area.

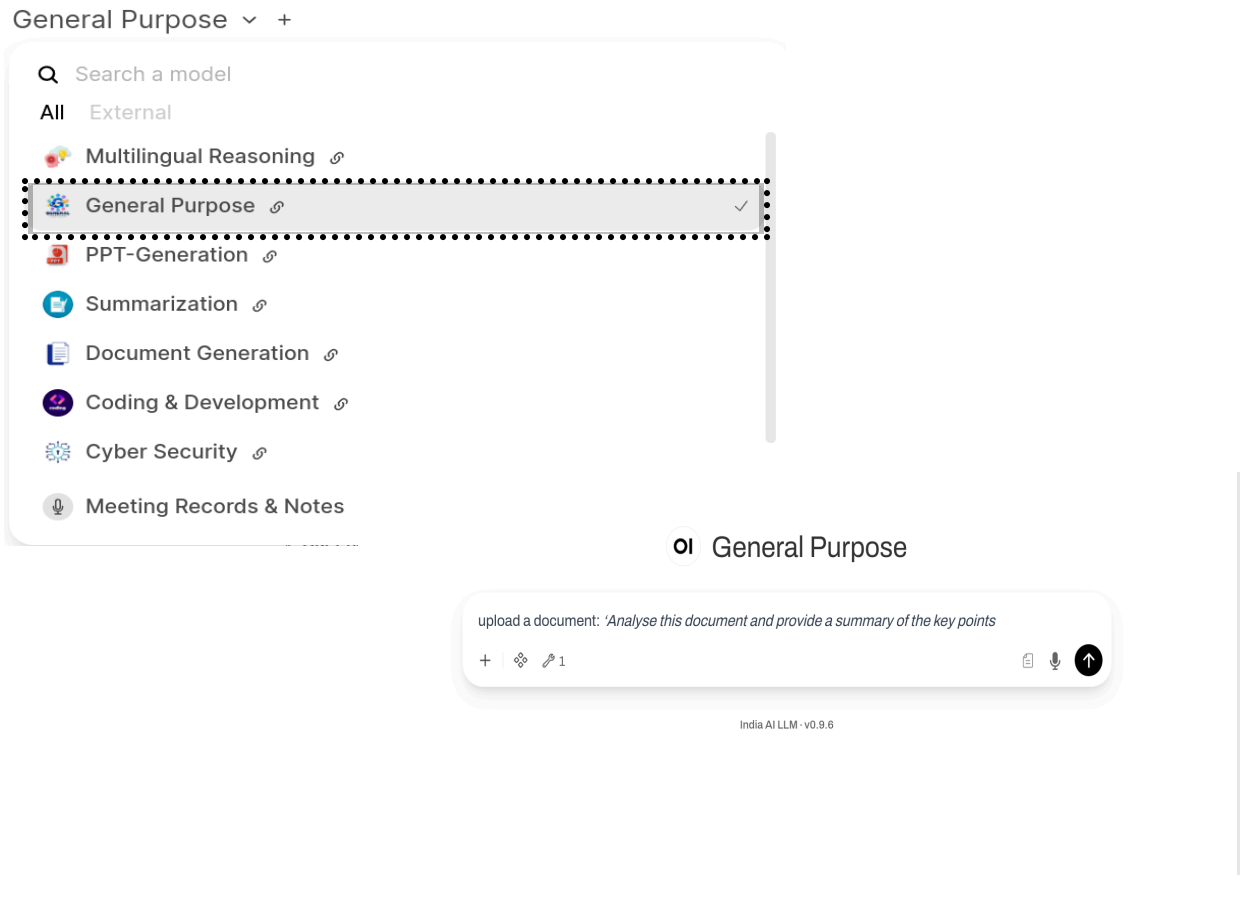

Figure: General Purpose Service Selection

Example: 1

Upload a document: 'Analyse this document and provide a summary of the key points.

4. PPT Generation

4.1. Creating a Presentation Using PPT Generation

Procedure

1. Open the **AI Service Selection menu**.
2. Select **PPT Generation**.
3. Upload a file in PDF or Word format, or Enter the topic for which the presentation needs to be generated.
4. Note: Only PDF and Word file formats are supported for file uploads.
5. Specify the number of slides and any specific presentation requirements, if applicable.
6. To make the presentation more comprehensive and informative, append the following instruction at the end of your prompt:
    a. "*Enhance the presentation by adding more meaningful bullet points and supporting content to each slide. Include relevant sub-points, examples, statistics, explanations, and key takeaways wherever appropriate to provide greater depth and context*".
7. Below are the examples. Each demonstrating good practice.

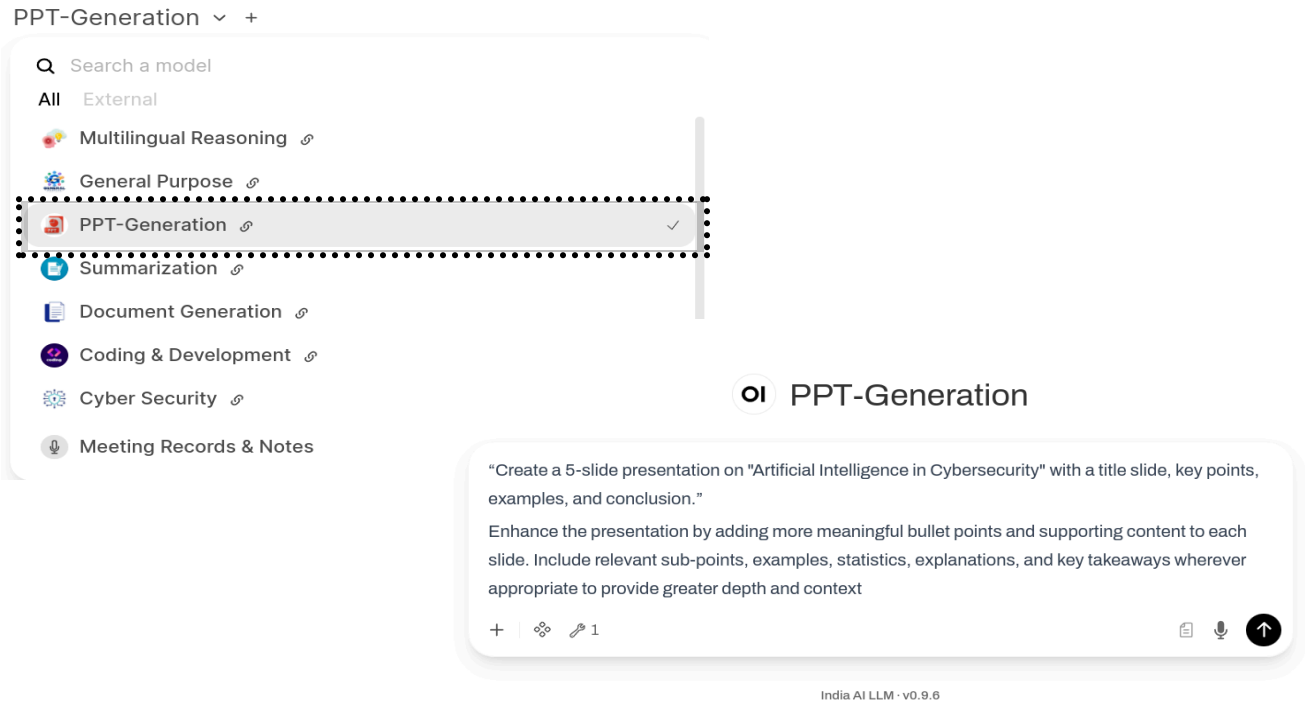

Figure: PPT Generation Service Selection

Example: 1 General (Let the model use full layout)

"Create a presentation on the National Digital Health Mission, covering its objectives, implementation phases, benefits for citizens, and challenges — around 8-10 slides."

Example: 2 General (for users who want more control)

“Create a 5-slide presentation on "Artificial Intelligence in Cybersecurity" with a title slide, key points, examples, and conclusion.

Enhance the presentation by adding more meaningful bullet points and supporting content to each slide. Include relevant sub-points, examples, statistics, explanations, and key takeaways wherever appropriate to provide greater depth and context.”

Example: 3 Explicit structure request (for users who want more control)

Slide 1 – Introduction
Slide 2 – AI Technologies
Slide 3 – Applications
Slide 4 – Benefits and Challenges
Slide 5 – Conclusion

Example: 4 Comparison-heavy topic (nudges a two_column slide)

"Create a presentation comparing on-premise government IT infrastructure versus cloud-based infrastructure, covering cost, security, and scalability."

Example: 5 Detail-emphasis prompt (reinforces richness)

"Create a detailed presentation on India's renewable energy targets, with thorough explanations in each bullet point, not just short phrases."

5. Summarization

5.1. Summarizing Content

Procedure

1. Open the **AI Service Selection** menu.
2. Select **Summarization**.
3. Provide the content to be summarized or upload a PDF or Word file for summarization. Only PDF and Word file formats are supported.

4. Review the generated summary.
5. Paste the Content. Upload a government order and prompt the model.
6. Below are the examples with best practices.

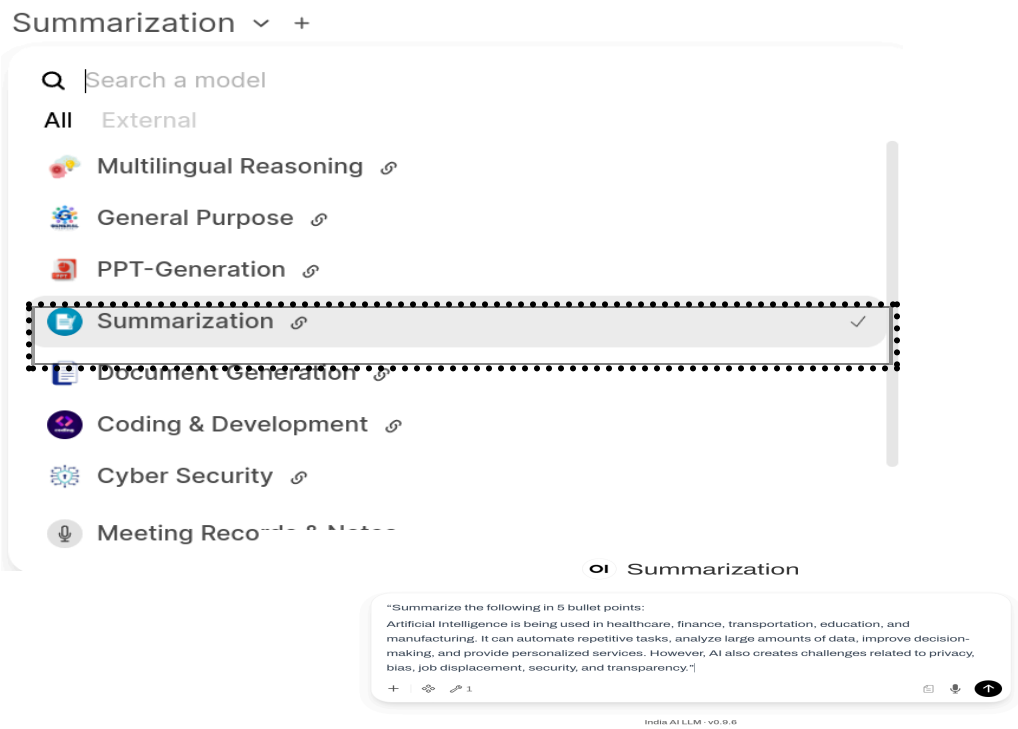

Figure: Summarization Service Selection

Example: 1

- “Summarize the following in 5 bullet points:
- “Summarize the key provisions and implementation requirements.”

Example: 2 Prevents cross-document leakage (specify the document explicitly)

- "Summarize only the document named '<filename>'. Do not include any information from other documents in this conversation."
- "Give me a summary of '<filename>.pdf' — restrict your answer strictly to that file's content."
- "Based only on '<filename>', provide a summary. Exclude any other uploaded file."
- "Summarize just the file '<filename>.docx' I uploaded. Ignore content from any previously uploaded documents."

Example: 3 Improving precision and accuracy

- "Summarize this document with high precision and factual accuracy. Include only information explicitly stated in the text — do not infer, assume, or add outside knowledge."
- "Provide a concise, accurate summary of this document. Preserve exact figures, dates, names, and terminology as written. Do not paraphrase in a way that changes the original meaning."
- "Summarize the key points of this document accurately and objectively, in a natural tone. Avoid vague generalizations — reference specific details from the text."

Example: 4 Combined "best practice" template (recommended default for the manual)

> "Summarize only the document named '<filename>'. Base the summary strictly on this document's content — do not include information from any other uploaded document. Be precise and factually accurate: include exact figures, dates, and names as stated, and avoid adding any information not explicitly present in the text."

6. Document Generation

6.1. Creating a Document

Procedure

1. Open the **AI Service Selection** menu.
2. Select **Document Generation**.
3. Enter the document topic.
4. Specify the required sections.
5. Submit the request.
6. Below are the examples with best practices.

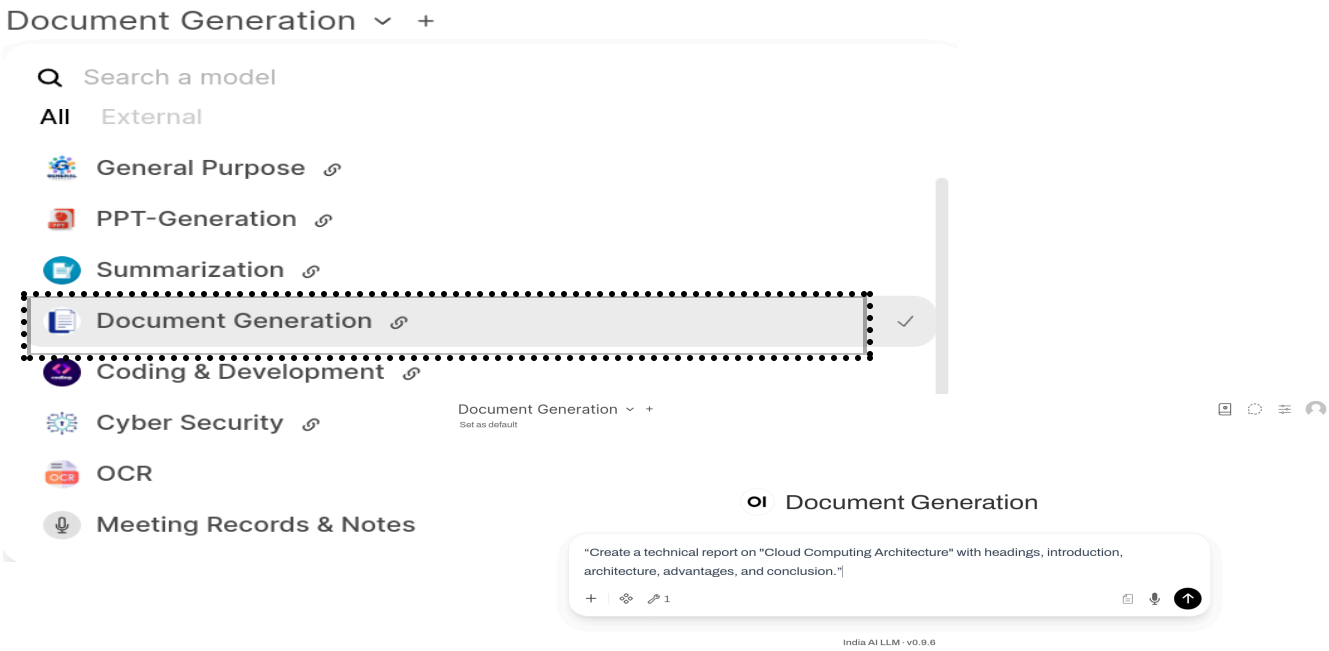

Figure: Document Generation Service Selection

Example: 1 Be specific about depth/length

"Create a detailed 5-6 section report on..." rather than "write me a report on..."

Example: 2 Name the organization and classification explicitly

"Create a report on the rural broadband rollout for the Ministry of Electronics and IT, marked Internal."

Example: 3 Ask for tables whenever comparing or listing structured data

"Include a table comparing budget, timeline, and status across the three project phases."

Example: 3 Avoid single-line vague prompts

"make a report on X" tends to produce a short, flat document with no callouts, tables, or subsections, since nothing in the prompt signals that richer structure is warranted.

7. Coding & Development

7.1. Using the Coding & Development Service

Procedure

1. Open the **AI Service Selection** menu.
2. Select **Coding & Development** service.
3. Enter the coding related question or requirement.
4. Submit the request.

Figure: Coding & Development Service Selection

Example: 1

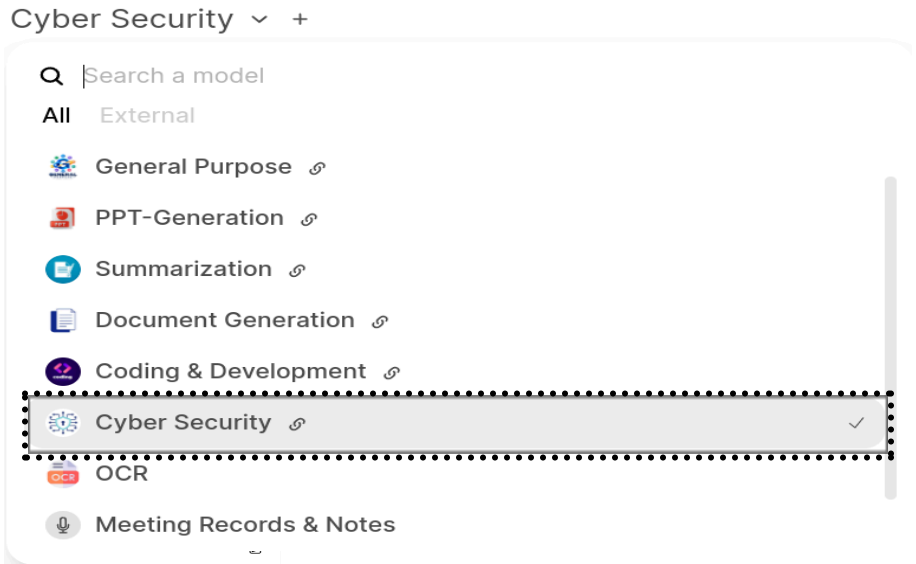

“Identify error in the given code”

8. Cyber Security

8.1. Using the Cyber Security Service

Procedure

1. Open the **AI Service Selection** menu.
2. Select **Cyber Security.**
3. Enter the cybersecurity-related question or requirement.
4. Submit the request.

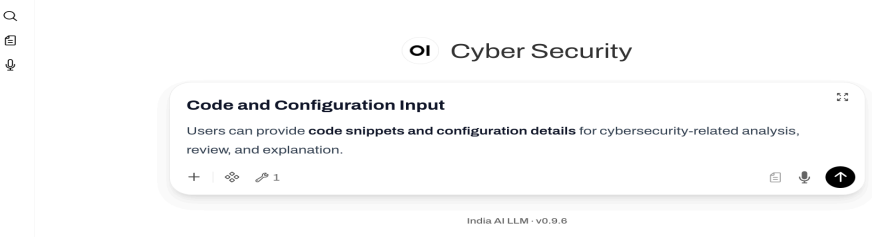

Figure: Cyber Security Service Selection

Example: 1

Code and Configuration Input

Users can provide **code snippets and configuration details** for cybersecurity-related analysis, review, and explanation.

9. OCR

9.1. Using OCR

Procedure

1. Open the **AI Service Selection** menu.
2. Select **OCR**
3. Upload the file or image.
4. Submit the request.

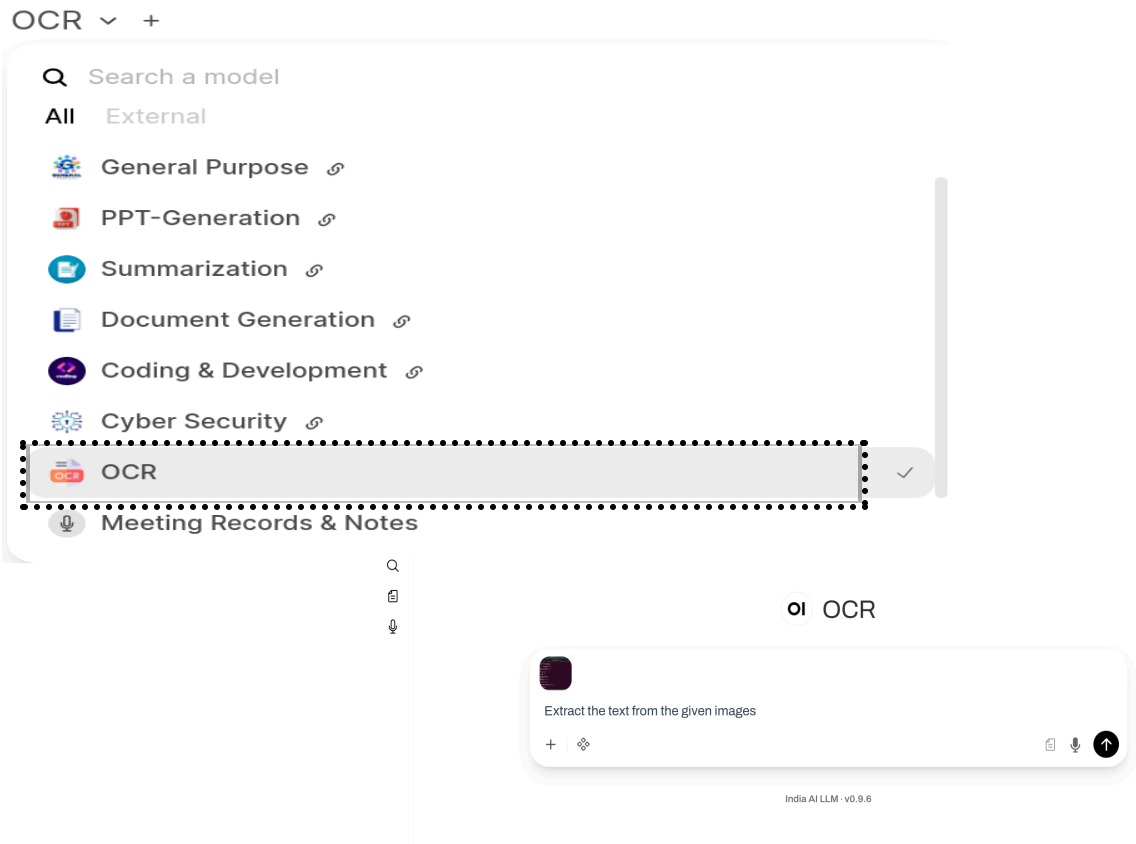

Figure: OCR Service Selection

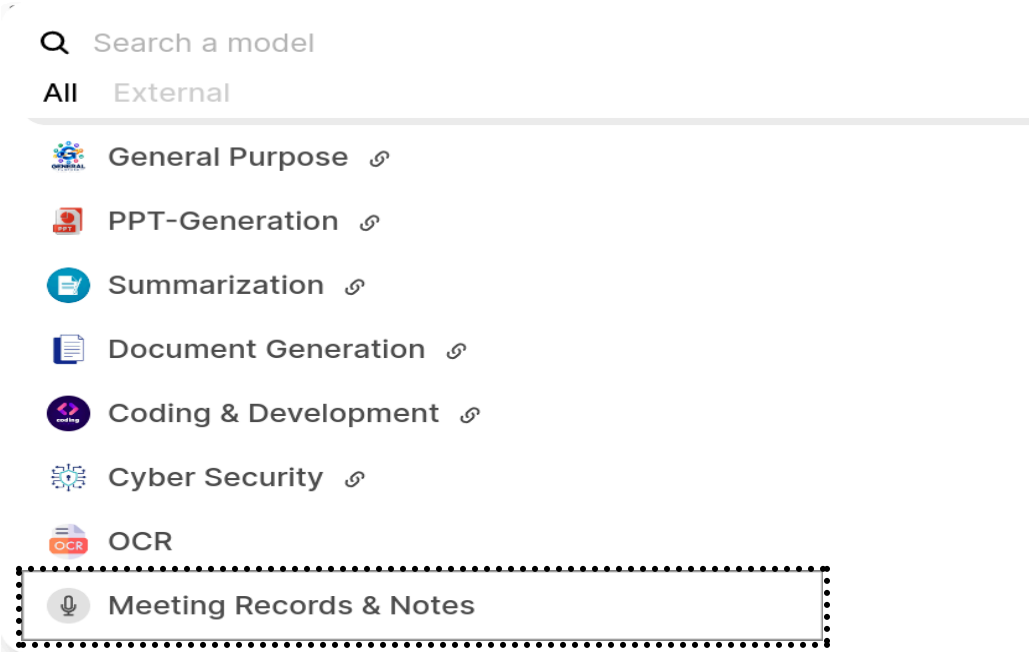

Example :

“Extract the text from the given images”

10. Meeting Records & Notes

Procedure

1. Open the **AI Service Selection** menu.
2. Select **Meeting Notes & Records**.
3. You will be redirected to **VaartaBharatAI**, where you can log in using your **Parichay credentials**.
4. Submit the request.

5. After successful login, you will be redirected to VaartaBharatAI at https://vaarta.bharatai.gov.in/
6. From there, you can proceed with submitting your request.
